

TMC MP asks govt to clarify if it pushed for Adani project with Dhaka

Mohua Chatterjee

When you buy a new phone, you actually want it to last. Your phones are an essential part of your life, and you want to hang onto them for as long as possible. But the constant use is bound to take a toll on your phone's lifespan. Unfortunately, nowadays, most phones don't last for more than two or three years. Though taking good care of your phone can help you make it last long, once the three-year mark has passed, you might start noticing a decline in the performance and capabilities of your phone. It's usually at this point that your hardware becomes outdated, the battery starts declining and people start looking at replacing their devices.

But why would you settle for a couple of years with your phone when you can have many more? The flagship OnePlus 11 5G, the latest offering by OnePlus, is a game changer. It's packed with everything from the latest hardware to updated software specifically designed to increase the phone's lifespan.

OnePlus 11 5G is equipped with top-of-the-line hardware for extended usage that makes the phone faster and long-lasting. It boasts a massive 16GB RAM with LPDDR5X and UFS 4.0 that ensures powerful performance, better power efficiency, wider bandwidth, and improved read and write speeds. Now no task is a challenge for you. The LPDDR5X DRAM is upto 33% faster, 20% more efficient and offers 30% wider bandwidth than its predecessor while UFS 4.0 reads upto 100% faster and writes upto 133% quicker as compared to the UFS 3.1. All these hardware updates make OnePlus 11 5G establish a long battery life. Additionally, RAM-Vita, OnePlus' in-house machine learning technology, compresses apps and intelligently allocates RAM for future-proof fluency.

With the hardware warranting a long lifespan of the phone, OnePlus 11 5G also ensures that the single charge of your battery lasts just as long. The supersized 5000 mAh battery is enough to power your phone for a day quite comfortably. But when you do need a quick charge, the 100W SUPERVOOC charger and Smart Rapid Charge Mode take the battery from 1-100% in just 25 mins. What's more? The battery remains at its peak capacity and maintains a fast charging speed for four years. OnePlus 11 5G also features AI Charged Acceleration, wherein supercharging kicks in at a 1% battery level when you need a quick recharge. Also, OnePlus has integrated a battery health engine in the OnePlus 11 5G, which extends the battery lifespan and retains its high charging speed.

But quick charging doesn't mean poor battery health. The OnePlus 11 5G has passed pressure tests and drop tests as well as efficiently operated in fluctuating high and low temperatures to get the TÜV Rheinland certification for safe charging and usage. The TÜV Rheinland safety certification ensures that with more than 10 temperature sensors, independent IC and temperature monitoring, the battery stays safe in real time. The OnePlus 11 5G also has the TÜV SÜD 48-month Fluency Rating A as it withstood stringent tests with an ageing model to evaluate its fluency rate in terms of some common user scenarios such as opening the Dialpad, camera, and reading photos. With these outstanding updates, your phone remains as good as new for years to come.

The base 8GB RAM with 128GB storage variant is priced at ₹56,999, whereas the 16GB RAM with 256GB storage is available for ₹61,999. OnePlus 11 5G is now available for sale in two colours, Titan Black and Eternal Green, on Amazon India, OnePlus Online store and OnePlus offline stores across the country. Grab your OnePlus 11 5G today!
